I. BOARD ADOPTION

Amendments to Rule 422, New Source Performance Standards (NSPS) and 423, National Emission Standards for Hazardous Air Pollutants and Source Categories (NESHAPs) were adopted by the Eastern Kern Air Pollution Control District's Governing Board its regular Board Meeting held January 11, 2018, at the Tehachapi Police Department Community Room, located at: 220 West "C" Street, Tehachapi, California and at the Ridgecrest City Hall, located at: 100 West California Avenue, Ridgecrest, California.

II. INTRODUCTION

This staff report presents the amendments made to Rule 422, NSPS and Rule 423, NESHAPS. The primary reason for amending Rules 422 and 423 is to update the source categories and standards promulgated by the EPA.

On November 2, 2018 the District held a public rule development workshop at the Mojave Veteran's Building in Mojave, CA. At this workshop District staff presented proposed amendments to Rules 422 and 423. A 30-day public review and comment period followed the workshop ending December 4, 2017. The District received no comments by the close of the 30-day review period.

Appendix A is the revised ~~strikeout~~ underline version of Rule 422 New Source Performance Standards (NSPS).

Appendix B is the revised ~~strikeout~~ underline version of Rule 423 National Emission Standards for Hazardous Air Pollutants and Source Categories (NESHAPS).

III. BACKGROUND

The federal Clean Air Act (FCAA) requires EPA to establish New Source Performance Standards (NSPS) for sources emitting pollutants that affect national ambient air quality standards (NAAQS). Sources constructed or significantly modified after applicability date(s) are subject to the conditions of the appropriate standard.

The FCAA also requires EPA to develop standards for Hazardous air pollutants (HAP) based on stringent air pollution measures known as Maximum Achievable Control Technology (MACT). MACT standards are titled as "National Emission Standard for Hazardous Air Pollutants" (NESHAP) in the Code of Federal Regulations. These standards are separated by source categories.

Facilities that are subject to MACT standards are major sources with toxic emissions greater than 10 tons per year (tpy) of a single HAP or 25 tpy of any combination of HAPs. EPA promulgates new standards and revisions to existing standards as needed. The authority to implement and enforce these standards is delegated to local air pollution control districts on a case-by-case basis.

Rule 422 incorporates by reference the NSPS as promulgated by EPA and codified into 40 CFR Parts 60. Rule 423 incorporates by reference the NESHAPs as promulgated by EPA and codified into 40 CFR Parts 61 and 63.

EPA develops and adds new source categories to the NSPS and NESHAP as needed. Therefore, the District periodically reviews 40 CFR Parts 60, 61 and 63, for newly delegated source categories to include in Rules 422 and 423. Amendments to Rules 422 and 423 reflect revisions to the NSPS and NESHAP up to October 10, 2017.
