RULE 208.2 Criteria for Finding of No Significant Environmental Impact (California Environmental Quality Act) - Adopted 4/25/83, Amended 6/1/87, 5/2/96

I. Purpose of Rule

This Rule establishes criteria by which a project under review by KCAPCD can be found to have no potential for causing a significant environmental impact, and, thus, be granted a general rule exemption pursuant to Section 15061(b)(3) of the State CEQA Guidelines.

II. Criteria For Authorities to Construct

Pursuant to Section 15061(b)(3) of the State CEQA Guidelines, an activity is not subject to CEQA if it can be seen with certainty that there is no possibility that the activity may have a significant effect on the environment.

For purposes of determining which proposed projects reviewed by the Air Pollution Control Officer have no potential to cause a significant effect on the environment, a new or modified emissions unit (as defined in Rule 210.1, Subsection II.L.) at a facility shall be found to have no potential for causing a significant effect on the environment if the new or modified emissions unit meets all of the following requirements:

A. All answers to the KCAPCD "Environmental Information Form and Initial Study Evaluation" (see Appendix A) are "No";

B. The proposed new or modified emissions unit will comply with all applicable requirements and limits established in Regulation IV of the Kern County Air Pollution Control District Rules and Regulations, and all provisions of state and federal law and regulations which the Kern County Air Pollution Control District has authority to enforce;

C. Expected emissions from the proposed new or modified emissions unit are calculated using:

1. Standardized emission factors from published CARB or U.S. EPA sources;

2. Source tests for the same or similar facilities conducted in accordance with CARB or U.S. EPA test methods;

3. Recognized formulas from published engineering and scientific handbooks, material safety data sheets, or other similar published literature;

4. Manufacturer's guarantees; and/or

5. Other fixed standards;

D. Best Available Control Technology (BACT) as required by Rule 210.1, Subsection III.A., is proposed and BACT is established based on:

1. The latest edition of the CARB/U.S. EPA BACT/LAER Clearinghouse;
2. The District's own compilations of BACT for specific types of sources; or

3. A more stringent BACT proposed by the project proponent;

E. Any emission reduction offsets required by Rule 210.1, Subsection III.B., are provided solely from emissions units within the facility at which the new or modified emissions unit is proposed to be constructed and the emission reductions from those units can be determined from source tests, production data, or other existing District records;

F. Any increase in the quantity or type of toxic air contaminants emitted from the facility is shown by a risk assessment prepared in accordance with current Cal-EPA guidelines to have increased cancer risk at any receptor outside the facility perimeter less than one in one million (1 x 10^-6) and total hazard index at any receptor outside the facility perimeter less than 0.2; and

G. The proposed project will not have a significant impact due to cumulative effects of successive projects of the same type at the same location.

III. **Criteria for Permits to Operate**

The issuance of the initial or renewal Permit to Operate for a new or modified emissions unit shall be found to have no potential for causing a significant effect on the environment if the source will meet all conditions imposed by any and all Authority to Construct permits associated with such emissions unit and all applicable laws, rules, and regulations enforced by the District.

IV. **Exempt Projects**

General project types found by the APCO to be exempt from CEQA, based on Section II. of this Rule, shall be listed in Appendix A of KCAPCD's Board-adopted CEQA Guidelines.
